Index of Subjects Appearing in the Text Entries

There are many possible ways to create an index. It is possible to break down the category “Mathematical instruments” into hundreds of individual entries or simply include everything in the one super category. It is recommended that anyone using this index not only look for individual categories (e.g., planimeters) but also check under more inclusive terms (e.g., integrator, and Instrument, analog, etc.). Every entry could be indexed in multiple ways, the entries here are the ones that we judged most likely to be helpful.
